## Piercing Aftercare

Wash your piercing twice a day  
with **antibacterial soap and water**.

the last thing to ever touch your  
piercing should be **clean water**

**DO NOT** use topical ointment  
(eg neosporin, vaseline)

**DO NOT** use alcohol/peroxide/bactine

**DO NOT** touch your piercing unless  
you're cleaning it

Piercings are foreign objects to your body

If you remind your body that it's there,  
it will try to reject it

The more you touch your piercing,  
the longer it will take to heal.

**DO NOT** change your jewelry

For 3 months.

If you have any questions or concerns please feel free to call or stop by anytime and will be  
happy to help out.
